

SHASHANK G

📍 Bengaluru, Karnataka, India ✉ shashankg1808@gmail.com ☎ +916363457242

SUMMARY

AI/ML engineering student proficient in Python, machine learning, NLP, and full-stack development. Experienced in building practical, AI-driven applications and automated systems through academic and self-initiated projects.

EXPERIENCE

- Built a strong foundation in Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, DBMS, and Backend Development through coursework and hands-on projects.
- Developed AI-driven applications using Python, FastAPI, React, SQL, NLP, OCR, RESTful API design, and Machine Learning.
- Executed the complete software development lifecycle, including system design, API integration, testing, optimization, and deployment of scalable AI solutions.

PROJECT

AI-Resume Analyzer

December 2025 - January 2026

- Developed a full-stack AI-powered Resume Analyzer using React, FastAPI, NLP, LLMs and the Groq API to analyze PDF/DOCX resumes and generate ATS compatibility scores.
- Implemented keyword analysis, job description matching and AI-driven recommendations for resume optimization.
- Build an interactive frontend for real-time analysis and section-wise feedback, enhancing ATS performance and job readiness.

Automated Grading System

January 2026 - February 2026

- Developed an AI-Powered automated grading system that evaluates handwritten answer sheet using OCR, NLP and semantic similarity to reduce manual grading effort.
- Implemented examiner-style marking logic and diagram evaluation to deliver consistent, question-wise score breakdowns while capping total at 100.
- Streamlined both PDF and manual workflows, improving assessment accuracy and transparency through detailed, explainable AI-driven insights.

Health Insurance Fraud Detection System

March 2026 - April 2026

- Developed FraudShield, a full-stack AI-powered healthcare insurance fraud detection system leveraging an ensemble machine learning approach (Gradient Boosting and Isolation Forest) to detect anomalous insurance claims and generate real-time fraud risk scores.
- Built a Flask RESTful API for claim processing, model inference, authentication, and SQL database integration using SQLite.
- Built an interactive React dashboard to visualize fraud analytics, claim statistics and network visualization.
- Implemented detection models for inflated billing, duplicate claims, ghost patients and organized fraud rings, achieving over 99% detection accuracy while improving fraud investigation efficiency and decision-making.

EDUCATION

Bachelor of Technology in AI/ML

SKIT • Bengaluru, India • August 2027 • 7.66

- Current CGPA: 7.66.

Senior Secondary (CBSE) –PCMB

Kendriya Vidyalaya No.2 • Bengaluru, India • 2023

- 71.2%.

SKILLS

Pandas, Numpy, Matplotlib, PyTorch, Git, MySQL, MongoDB, PowerBI

Frontend Engineer, Full- Stack Developer

Generative AI, NLP, Machine Learning, Deep Learning
